1.Ideation Phase

Objective:

Create an automated system in ServiceNow Flow Designer that classifies incoming tickets based on their short description, description, category, and other ticket details.

1. Ideation

The idea is to reduce manual ticket classification by automatically identifying the type of incident/request and assigning the appropriate Category, Subcategory, Assignment Group, and Priority.

2. Proposed Flow

New Ticket Created

↓

Flow Designer Trigger

↓

Read Ticket Details

↓

Analyze Ticket Description

↓

Classify Ticket

↓

Set Category & Subcategory

↓

Assign Assignment Group

↓

Set Priority

↓

Update Ticket

↓

Notify Support Team

3. Example

If a user creates:

Short Description: “Unable to connect to Wi-Fi” The

Flow Designer can classify it as:

Category: Network

Subcategory: Wi-Fi

Assignment Group: Network Support

Priority: Medium

4. Benefits

Reduces manual work.

Improves ticket-routing accuracy.

Speeds up ticket assignment.

Provides consistent classification.

Helps support teams respond faster
