7.Project Demonstration

1. Introduction

Auto Ticket Classification using Flow Designer is a ServiceNow project that automatically identifies and classifies incoming tickets based on their details, such as Short Description, Description, Category, and Priority. This reduces manual work and helps assign tickets to the appropriate support team.

2. Project Demonstration Steps

Step 1 – Create a Ticket

Open ServiceNow → Incident.

Create a new incident.

Enter the Short Description and Description.

Example: “Unable to connect to Wi-Fi”.

Step 2 – Flow Trigger Open

Flow Designer.

Create a new flow named Auto Ticket Classification.

Set the trigger as Incident → Created or Updated.

Step 3 – Classify the Ticket Use If / Else If conditions to identify the ticket type.

Example:

Ticket Description

Classification

Password reset

Access

Laptop not working

Hardware

Software installation

Software

Network/Wi-Fi problem

Network

Step 4 – Update Incident Based on the classification, Flow Designer automatically updates:

Category

Subcategory

Assignment Group

Priority, if required.

Step 5 – Assign the Ticket The flow sends the ticket to the appropriate support group.

Example:

Wi-Fi Problem → Network Category → Network Support Group

3. Demonstration Flow

New Incident Created

↓

Flow Designer Trigger

↓

Read Incident Description

↓

Check Conditions

↓

Classify Ticket

↓

Update Category/Subcategory

↓

Assign Support Group

↓

Ticket Ready for Resolution

4. Expected Result

When a user creates an incident, the Flow Designer automatically analyzes the ticket information and classifies it according to predefined conditions. The appropriate category and assignment group are updated without requiring manual classification.
